Project Description

A javascript single page web app that maintains a list of bookmarks added by the user. Each link when added gives the user the ability to edit and delete in place. The app is fully a front end app with no backend technologies being used.

Architecture

Technologies used are as follows -

- Html

  Used to structure app.

- CSS

  Used for basic styling of app

- React

  Front end library used to render various views and components in app. React is component based which can be composed together to make complex UIs.

- Webpack

  Module bundler that takes modules with dependencies and generates static assets.

Limitations

Being fully front-end with no backend technologies we are unable to verify that urls exist because of same origin policy.
